# World Horticultural Trade and U.S. Export Opportunities

## Value Gain In U.S. Horticultural Product Exports Remains Strong in FY 2000

Horticultural Commodity Gains by Value in FY 2000

FY 2000: October-April period  
Changes are from the same period in FY 1999  
Source: U.S. Bureau of the Census

U.S. horticultural product exports during the first 7 months (October-April) of fiscal year (FY) 2000 totaled \$5.9 billion, unchanged from the same period last year. However, some U.S. horticultural product sales are posting strong export gains in FY 2000. Fresh oranges, valued at \$173 million, lead U.S. horticultural export value gain, with an increase of more than 40 percent from the same period the previous year. Shipments of strawberries, peaches, and peppers are also strong, with increases of 39 percent, 31 percent, and 23 percent, respectively. Wine exports are running at a record pace, with shipments during October-April valued at \$307 million, up 5 percent from the same period the previous year. Total U.S. horticultural sales to Canada, the largest U.S. horticultural export market, continue strong, with shipments during October-April valued at \$1.8 billion, up 4 percent from the same period the previous year. U.S. exports of horticultural products to Mexico were valued at \$494 million, up more than 30 percent from the same period last year.

To access **FAS Attache Reports** online, please reference the following Internet address:

<http://www.fas.usda.gov/scriptsw/attacherep/default.asp>

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries. Search by keyword, including country and commodity.

### **Cocoa and Honey Reporting Coverage Discontinued**

Beginning with the June, 2000, Tropical Products: World Markets and Trade Circular and the November, 2000, Sugar: World Markets and Trade Circular, commodity and country analysis and statistical tables for cocoa and honey will be discontinued. This decision was necessitated due to declining Foreign Agricultural Service budget resources and the need to more strategically target remaining resources in support of the agency's primary mission to facilitate the expansion of export opportunities for U.S.-produced agricultural commodities. The Horticultural and Tropical Products Division (HTP) expects to continue to receive voluntary reporting on cocoa and honey production and trade from an abbreviated number of countries and these will continue to be posted on the FAS and HTP Home Pages upon receipt.

### **What's New on the Homepage?**

The Horticultural & Tropical Products Division has introduced an enhanced feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site will contain information on policy and technical developments affecting trade in horticultural commodities, as well as selected reports submitted by FAS overseas offices and special reports prepared by the division. The information will typically remain on the site for approximately one month, before being archived. For further information on this new feature, please contact Nancy Hirschhorn (202) 720-2974. Go to <http://www.fas.usda.gov/htp/> and click on "What's New?"

### **Export Summary**

U.S. exports of horticultural products to all countries in April totaled \$820 million, up slightly from the same month a year earlier. Seven of the 15 product categories registered value increases. Categories with the most significant increases in April were citrus (up \$22.6 million or 48 percent) and hops (up \$2.6 million or 42 percent). The categories with the most significant decreases were fruit and vegetable juices (down \$15.3 million or 20 percent) and tree nuts (down \$9.9 million or 15 percent). For FY 2000 to date (October-April), the total value of U.S. horticultural exports was \$5.9 billion, slightly down from the same period in FY 1999.

## World Raisin Situation and Outlook

Raisin production in selected countries is expected to fall in 1999/2000, for the second consecutive year. Smaller raisin crops in Chile, South Africa, Greece, Turkey and Mexico in 1999/2000 will lead to a 4 percent decline in world raisin production. Only Australia and the United States are expected to post increases in raisin production during 1999/2000. As a result of the smaller raisin crop, exports for selected countries are expected to be down 8 percent to 365,000 tons in 1999/2000. Australia is the only country that estimates a significant increase in exports. Australia's raisin exports are forecast to rise 87 percent to 10,000 tons, still far below the average level of raisin exports.

### Southern Hemisphere

#### Australia

The 1999/2000 (March 2000 - February 2001) raisin crop is expected to rise by 48 percent to 32,500 tons. Recent developments in production techniques, such as trellis drying, are driving this increase in production. At the same time, winemakers, which had been purchasing sultana grapes for the production of certain types of wine, have greatly reduced their intake of sultana varieties. This alone is expected to increase the supply of raisins by 4,000 to 5,000 tons. Despite this increase, raisin production is still not expected to reach the record level achieved in 1997/98. Raisin production in 1998/99 was changed from 20,700 tons to 22,000 tons in line with revised industry estimates. Unfavorable weather during 1998/99 led to a 43 percent decline in production compared to 1997/98.

Exports during 1999/2000 are expected to reach 10,000 tons, up 87 percent from 1998/99 as a result of the larger than expected raisin crop. Raisin exports fell in 1998/99 by 63 percent to 5,337 tons due to a sharp reduction in production. The major export markets in 1998/99 were Canada, Germany, New Zealand, the United Kingdom and Japan. Raisin imports increased 11 percent in 1998/99 to 12,714 tons, but with greater production expected in 1999/2000, raisin imports are forecast to decline by 10 percent to 11,500 tons. Turkey continues to be the largest supplier of raisins in Australia, with 55 percent of the market.

#### Chile

Raisin production is forecast down 14 percent to 31,000 tons in 1999/2000 (January 2000 - December 2000) as a result of a significant decline in export prices due to weak export demand. Weak demand has also caused prices for discarded grapes, which are dried for raisins, to fall in 2000 from an average of U.S. \$0.20 per kg to U.S. \$0.10 per kg.

During 1998/99, raisin production was significantly higher than initially estimated and 29 percent above the previous year. Raisin production had been expected to decline in 1998/99 due to smaller table grape production and increased competition by the wine and juice concentrate industries for grapes discarded by the fresh fruit industry. However, there was less competition from the wine industry in light of increasing production by newly planted vineyards dedicated to wine grapes. Higher raisin prices together with a strong export demand also had a positive effect on total raisin production during 1998/99.

Exports are expected to fall by 17 percent to 27,000 tons in 1999/2000 due to a decline in raisin production. Over 90 percent of Chile's raisin production is exported. The largest destinations for Chile's raisins are the United States, Mexico, Brazil, Peru and Colombia. Chile does not import raisins.

### **South Africa**

Raisin production is forecast to decline by 11 percent in 1999/2000 (January 2000 - December 2000) as a result of poor weather conditions during the fruit drying period. Production is expected to reach 36,000 tons in 1999/2000 compared to 40,438 tons in 1998/99.

Exports during 1999/2000 are expected to increase slightly to about 26,500 tons. The European Union is South Africa's major export destination point for agricultural products, including dried fruit. South Africa's major markets during 1998/99 were the United Kingdom, the Netherlands, Germany, Canada, France and Japan.

Under the EU-South African Free Trade Agreement, South African dried fruit will soon be subject to preferential tariff quotas in the European market. However these products will not have duty free entry that other South African products will eventually enjoy.

### **Northern Hemisphere**

#### **Greece**

The 1999/2000 raisin crop (September 1999 - August 2000) has been revised downwards to 22,500 tons, a 20 percent decline from the previous year. Hot and dry conditions during the growing period combined with wet weather during the fruit drying period negatively affected the quality and output of the 1999/2000 raisin crop. Raisin production in 1998/99 has also been revised down to 28,000 tons and was of good quality.

Raisin exports are expected to fall from 24,000 tons in 1998/99 to 22,000 tons in 1999/2000. Greece's official trade data reports that in 2000, raisin exports to Australia have increased sharply. During 1998/99 major markets for Greece's raisins were Germany, the Netherlands, the United Kingdom, France, Poland and Canada.

## Turkey

Raisin production during 1999/2000 (September 1999 - August 2000) remains unchanged from the earlier forecast of 190,000 tons. After two consecutive years of excellent crops and record highs, raisin production is thus expected to fall by 24 percent during 1999/2000 compared to the previous year. Crop disease and hail in some producing areas resulted in smaller and lower quality raisins.

Exports during 1998/99 are expected to be up slightly from 186,700 tons to 190,000 tons, despite the small crop. Between September 1999 and April 2000, the largest destinations for Turkey's raisins were to the United Kingdom, Germany, the Netherlands and Italy. Imports are expected fall from 3,131 tons in 1997/98 to 3,000 tons in 1998/99, a 4 percent decline. The import duty for raisins in 2000 is 57.3 percent of the CIF value on raisin imports.

## United States

Raisin production in 1999/2000 has been revised up from 267,183 tons to 297,557 tons, up 18 percent from the previous year.

Exports are estimated to fall 23 percent in 1999/2000 to reach 85,000 tons as a result of strong domestic demand and low stock levels. Year to date (August 1999 - April 2000) raisin exports are 60,000 tons. Major markets for U.S. raisins include Japan, the United Kingdom, Canada, Sweden and Denmark. Imports are also estimated to fall from a high of 24,750 tons in 1998/99 to 18,000 tons in 1999/2000, as a result of the larger raisin crop.

For the 2000/01 marketing year (August 2000-July 2001), the Raisin Administrative Committee (RAC) has received a budget ceiling of \$2.07 million to market California raisins under the Market Access Program (MAP). MAP funding is allocated for the same markets targeted in 1999/2000 and include China, Hong Kong, Japan, Malaysia, Philippines, Scandinavia (Denmark, Finland, Norway, and Sweden), Singapore, Taiwan, and the United Kingdom. The RAC's primary objectives in these markets are to increase consumer and trade awareness of the quality of California raisins, and to show the product's versatility in baking and cooking.

*(The FAS Attaché Report search engine contains reports on the Dried Fruit industries for 6 countries, including Australia, Chile and South Africa. For information on production and trade, contact Karina Ramos at 202-720-0897. For information on marketing contact Kelly Strzelecki at 202-690-1341.)*

## Processed Tomato Products Situation and Outlook in Selected Countries

Production of tomatoes for processing in 11 major producing countries in 2000 is forecast at 22.4 million tons, down 7 percent from a record output in 1999. The decline was attributed mainly to a 16 percent drop in U.S. output and a 7 percent decline in Western Mediterranean countries, with Italy accounting for the region's largest decline. Production of tomato paste in selected countries, excluding the United States, in 2000/2001 is forecast at 1.48 million tons, down 8 percent from last year's record level, due mostly to abundant supplies and lower prices. Production of canned tomato pack in selected countries in 2000/2001 is forecast at 2.1 million tons, down 11 percent from the previous year's record, due primarily to an expected decline in Italian output. During this same period, exports of tomato paste from selected countries are forecast at 1 million tons, unchanged from 1999/2000, while exports of canned tomato pack are forecast at 908,000 tons, up 3 percent from 1999/2000.

### Western Hemisphere

In the **United States**, production of processing tomatoes under contract in 2000 is estimated at 9.6 million tons, down 16 percent from 1999. The decline in output is due mainly to a reduction in area caused by large carryover of stocks and lower wholesale prices for tomato products during the marketing year, following last year's record crop. California accounts for about 95 percent of the U.S. processing tomato crop. The bulk of U.S. tomatoes for processing is for tomato paste output.

U.S. exports of tomato products (canned tomatoes, tomato paste, ketchup and tomato sauce) in calendar year 1999 totaled 273,000 tons valued at \$226 million, down 6 percent in volume and 2 percent in value from 1998. Canada remained the biggest U.S. customer for tomato paste, sauce and canned tomatoes, while Japan was the top market for U.S. ketchup. U.S. imports of processed tomato products (canned tomatoes, ketchup, tomato paste and sauce) during the same period totaled 164,000 tons valued at \$116 million, up 7 percent in volume and 10 percent in value from 1998, due mostly to sizeable increases in paste imports from Chile and Mexico.

In **Mexico**, production of tomatoes for processing in 2000 is forecast at 240,000 tons, down 35 percent from the revised level in 1999, due to less planted area. The reduction is attributed to oversupply problems and lower prices from last year's record production. Tomato paste production in Mexico in 2000/2001 (March to February) is forecast at 36,000 tons, down 32 percent from the revised volume in 1999, due mainly to high international stocks. Exports of fresh tomatoes from

Mexico to the United States, are also expected to be down in 2000 due to supply pressure against the U.S. minimum floor price of \$5.27 per 25-pound box.

In **Brazil**, production of tomatoes for processing in 2000 is forecast at 1.0 million tons, down 18 percent from the revised level in the previous year, because of lower yields, disease and pest problems in Bahia Region, and large carryover of paste stocks. Nearly all of Brazil's processing tomatoes are made into paste. Output of tomato paste in 2000 is forecast at 110,000 tons, also down 18 percent, due mainly to lower Brix yields and high paste stocks.

In **Chile**, output of tomatoes for processing in 2000 is forecast at 975,000 tons, up 3 percent from 1999, due largely to an increase in planted area. Tomatoes for processing in Chile are planted from mid-September through December of each year and harvested from January 10 to April 15. Output of tomato paste in 2000 is forecast at 115,000 tons, down 2 percent from 1999 in spite of an expected larger output of tomatoes for processing, due to poor fruit quality caused by a delay of the harvesting season.

## **Mediterranean Area**

Production of tomatoes for processing in 2000 in the major producing countries in the European Union (EU) is forecast at 6.8 million tons, about the same as the previous year.

In **Spain**, production of tomatoes for processing in 2000 is forecast at 1.7 million tons, down slightly from 1999, due primarily to a reduction in planted area. Canned tomato production for the same period is forecast at 229,000 tons, down 1 percent from 1999 as a result of fewer deliveries of fruit to processors. Tomato paste production in 2000 is forecast at 184,000 tons, down 4 percent from the previous year as a result of fewer deliveries of fruit to processors, as well. Spain is a net exporter of fresh, canned and other tomato products, with very little market opportunities existing for U.S. exports of these products.

In **Portugal**, production of tomatoes for processing in 2000 is forecast at 970,000 tons, down 3 percent from 1999, due mainly to dry weather conditions existing early in the growing season. Portugal's output of processed tomato products consist mainly of tomato paste. Tomato paste production in Portugal in 2000 is forecast at 160,000 tons, down 15 percent from last year due mostly to lower area caused by dry weather. Tomato paste exports, accounting for the bulk of Portugal's tomato paste production, are forecast at 125,000 tons, unchanged from the previous year. As Portugal is self-sufficient in tomato and tomato products production, there are few opportunities to export U.S. tomato products to Portugal.

In **Greece**, production of tomatoes for processing in 2000 is forecast at 1.3 million tons, down 4 percent from a year ago, due largely to lower planted area. In spite of reduced area, production of tomato paste in Greece in 2000 is forecast at 209,000 tons, up 3 percent from 1999, due mostly to improved quality of fruit delivered to processors and expected higher Brix yields. Canned tomato

production in 2000 is forecast at 31,000 tons, up 2 percent from 1999, due mostly to increased deliveries to processors.

In **Turkey**, production of tomatoes for processing in 2000 is forecast at 1.7 million tons, down 17 percent from the previous year, due mainly to reduced area, because of farmers' dissatisfaction with the cash returns received for industrial tomatoes last year. Also, processors in Turkey are cautious about the potentially large output in California and extremely low export prices offered by China, and are not willing to increase their overall production volume this year. Production of tomato paste in 2000 is forecast at 260,000 tons, down 16 percent from 1999, due mostly to reduced area and large carryover of paste stocks.

In **France**, production of tomatoes for processing in 2000 is forecast at 330,000 tons, down 9 percent from 1999, due mostly to lower planted area. Production of tomato paste accounts for the bulk of processed tomatoes in France. In 2000, output of paste is forecast at 43,000 tons, down 11 percent from the previous year, due mostly to a decrease in fruit delivered to processors. Production of canned tomatoes for the same period is forecast at 29,000 tons, also down 11 percent from 1999. France continues to be a net importer of both canned tomatoes and tomato paste. There is almost no trade between the United States and France for these products.

In **Israel**, production of tomatoes for processing in 2000 is forecast at 256,000 tons, down 17 percent from the revised output in 1999, because of reduced area, high carryover stocks for processed products (canned tomatoes, tomato paste and sauce), and stiff international competition in the EU market for these products. In 2000, production of tomato paste in Israel is forecast at 28,000 tons, down 23 percent from the previous year, due mostly to fewer deliveries to processors. Exports continue to account for about 70 percent of Israel's tomato paste pack.

*(The FAS Attaché Report search engine contains reports on Tomatoes and Tomato Products industries for more than 10 countries, including the United States, Italy and Chile. For information on supply and demand, please contact Emanuel McNeil at (202) 720-2083. For information on marketing issues contact Elizabeth Mello at (202) 720-9903.*

## **World Trade Situation and Policy Updates**

### **Australia Opens Market to U.S. Pacific Northwest Cherries**

Effective June 15, 2000, the Australian Quarantine and Inspection Service (AQIS) modified its existing protocol to allow the entry of sweet cherries produced in approved counties of Washington, Oregon, and Idaho. With the Pacific Northwest (PNW) cherry season now underway, the opening is expected to offer a promising new outlet for exporters in the current season. The cherries must be fumigated with methyl bromide prior to export, as is the case with California cherries. Prior to this development, only fresh sweet cherries produced in 12 California counties, were allowed to be shipped to Australia, under a May 1996 agreement between USDA's Animal and Plant Health Inspection Service (APHIS) and its Australian counterpart, AQIS. USDA and the PNW cherry industry coordinated efforts in bringing about this expanded access agreement. California sweet cherry exports to Australia in 1999 totaled 319,000 tons, valued at \$1.4 million.

### **Taiwan Lifts Excessive Pesticide Sampling of Washington State Apples Effective June 18**

In response to a U.S. non-profit organization's survey of Washington State apples in which pesticide residues at levels dangerous to children were reportedly detected, Taiwan began lot-by-lot inspection of Washington State apple shipments on April 7. After protests from the American Institute in Taiwan that the survey findings did not show any residues above permitted U.S. tolerance levels and that 100 percent sampling violated a July 1999 Agreement to sample only one in forty lots of fresh produce, the Taiwan authorities reduced the sampling rate to one in ten lots on May 18. Finally, after multiple representations and no violative shipments, the Taiwan authorities agreed to return to a one in forty inspection rate effective June 18. U.S. apple exports to Taiwan were valued at \$56.5 million in 1999. Taiwan is the 3<sup>rd</sup> largest market for U.S. apples, with the United States enjoying a 97 percent market share.

### **Korea's Market is Ripe for U.S. Wine Exports**

The Republic of Korea has recovered strongly from the impact of the 1998 economic downturn and its wine imports are expected to grow at double digit rates through 2005, according to June 12 report submitted by ATO/Seoul. Korea's wine imports in the first quarter of 2000 were up 156 percent from the same period of 1999. From 1992 to 1997, Korea's total wine imports from all sources more than quadrupled from \$5.6 million to \$22.8 million. In 1999, U.S. exports to Korea reached \$2.7 million, up just slightly from the previous year, and climbing back toward the record \$3.5 million posted in 1997. In addition, U.S. exporters' share of the market continues to increase, reaching nearly

15 percent on a value basis in 1999. Although U.S. wine exports to Korea are assessed a tariff of 15 percent, along with assorted taxes (30 percent liquor tax, plus a 10 percent education tax), there are abundant and growing opportunities for U.S. exporters.

## **New Zealand Wine Production and Exports To Continue Rapid Expansion**

New Zealand's 2000 grape harvest is expected to increase to as much as 90,000 tons, exceeding last year's record 79,000 tons, due in part to the additional area of vines in production. A smaller harvest in Marlborough, New Zealand's largest wine producing area, is expected due to a cool wet flowering period. However, this will be offset by the exceptionally large harvests in other regions. During 1999, exports accounted for 30 percent of New Zealand wine sales, and this number is expected to rise to almost 50 percent by 2003 and 66 percent by 2010, according to the Wine Institute of New Zealand. Its largest export markets are the United Kingdom, Australia, and the United States. U.S. wine imports from New Zealand rose from \$7.8 million in 1998 to \$12.1 million in 1999. The New Zealand industry projects that exports will reach \$140 million by 2003, almost triple the 1998 total.

## **Argentine Citrus To Be Allowed into the United States**

USDA is amending its regulations to recognize four states within Argentina (Catamarca, Jujuy, Salta, and Tucuman, all located in northwestern Argentina) as being free from citrus canker. The regulations have also been amended to allow the importation into the continental United States of grapefruit, lemons, and oranges from these areas under certain conditions and with limited distribution. The citrus will be imported according to a systems approach of tiered and overlapping measures, which will allow for mitigation of pest and disease risk. These regulations will be phased in over the course of four years. Such an initiative will enable USDA to demonstrate, under actual production and distribution conditions, the effectiveness of the systems approach prior to allowing imports into U.S. citrus-producing areas. If problems are encountered during the first phase-in implementation period, the next phase-in will not be implemented until the problems are corrected.

During the 2000-2001 shipping season, the first stage of the implementation, fruit that meets the requirement will be eligible for entry into 34 northern-tier states in the continental United States. Fruit will not be allowed entry into any citrus-producing states or any of the 10 buffer states that border citrus-producing states. The second stage begins during the 2002 shipping season and will allow eligible fruit to be shipped to the 34 first-stage states and the 10 buffer states. Fruit still will not be allowed entry to citrus-producing states. Phase three begins with the 2004 shipping season and will allow eligible fruit to be shipped to all areas of the continental United States, only if the mitigating measures are working properly.

## **USDA Establishes Quarantine Zone for Plum Pox**

USDA announced that it is quarantining part of Adams County, Pa., due to the detection of plum pox. This action is necessary to prevent the spread of plum pox into non-infected areas of the United States. USDA has imposed restrictions on the interstate movement of regulated articles from and through the quarantined area. Plum pox was discovered in Adams County in the fall of 1999. Surveys of orchards in the county established that portions of Latimore and Huntington townships were infested with plum pox. The state of Pennsylvania immediately placed the area under quarantine. After further delimitation, APHIS determined that a federal quarantine is necessary. Prior to the discovery in Pennsylvania, plum pox had not been detected in the United States. APHIS, and the Pennsylvania Department of Agriculture are continuing an intensive survey and eradication program in and around the infested area. Plum pox virus, also known as sharka, infects stone fruit species including peaches, apricots, plums, and almonds. Most strains, including the one present in Pennsylvania, do not affect cherries. Fruit from infected trees may be deformed or blemished with spots or rings. The virus can also cause fruit to drop prematurely from the tree. Plum pox virus is transmitted from infected trees either by grafting (joining a bud with a growing plant) or by aphid vectors (insect suck sap from plants then carry the virus to other plants). No foreign restrictions on trade in these fruits due to plum pox exist, as the disease is not transmitted by the actual fruit.

## **EPA Proposes Revoking Methyl Parathion Tolerances**

EPA is proposing to revoke or amend the maximum pesticide residue limits (called tolerances) for the organophosphate insecticide methyl parathion on many fruits and vegetables such as apples, broccoli, brussels sprouts, carrots, celery, cherries, grapes, nectarines, peaches, pears and plums. This proposal follows up on the cancellations by the registrant of the use of methyl parathion on these and other commodities that EPA announced on Aug. 2, 1999. This decision was based on EPA's determination that showed acute dietary risks from methyl parathion in food did not meet current requirements for an extra margin of safety under the Federal Food, Drug, and Cosmetic Act as amended by the Food Quality Protection Act of 1996 (FQPA). EPA made that determination after completing a comprehensive review of methyl parathion's uses. EPA proposes to make these revocations and amendments effective upon publication of the final rule. EPA is working with the Food and Drug Administration, who issued guidance on how it will handle situations involving methyl parathion residues in foods that were legally treated with methyl parathion before January. The Federal Register is available at: <http://www.epa.gov/fedrgstr/EPA-PEST>. For more information on EPA's reassessment of methyl parathion, visit <http://www.epa.gov/pesticides/op>.

## **FAS Report on the EU Fruit and Vegetable Regime 2000**

The EU fresh fruit and vegetable regime was reformed in 1996. This reform allowed the Commission to tackle specific weaknesses of the old regime such as the abuse of the withdrawal

scheme in some Member States. The new regime reinforces the role of producer organizations, introduces the entry price system and takes account of the Uruguay Round accord. The EU processed fruit and vegetables regime was also reformed in 1996. The main objective of this regime is to provide financial assistance (production aid) to the processing industry. Neither the fresh nor the processed fruit and vegetable sector was part of last year's Agenda 2000 reforms. However, the EU Commission is required to review both regimes by the end of the year 2000 and present recommendations to the EU Council and Parliament. At this time, no major overhaul of EU support programs is expected. This report reviews the current system and how it is applied and is available online at: <http://www.fas.usda.gov/scripts/attacherep/default.asp>.

## **Mexico Lifts Quarantine on California Plums**

USDA announced that Mexico has lifted a quarantine on California plums and will resume the importation of the fruit effective immediately. In 1999, California exported 7,000 metric tons of plums to Mexico worth about \$5 million. At the time, Mexico was the fourth largest market in the world for California plums. Through negotiations with Mexican agricultural officials, APHIS was able to reopen the market for California plums in time for the 2000 shipping season. The market was closed after Mexican inspectors at the border detected the Oriental fruit moth in several shipments. Mexico does not have the Oriental fruit moth and considers it a quarantine pest. The fruit will now be exported under a management plan that requires a series of pest mitigation measures that include trapping and spraying. In addition, all California groves that export plums to Mexico must be registered with APHIS.

## **History of the WTO Sanitary and Phytosanitary Agreement**

The following is the first in a series of four articles on the WTO SPS Agreement:

It was in the context of the GATT Uruguay Round negotiations (1986-1994) that countries negotiated the reduction of agricultural tariffs as well as rules to control the use of sanitary and phytosanitary regulations in trade. These issues came together because negotiators realized that as tariffs came down governments could, unless rules were in place, resort to the use of sanitary or phytosanitary measures as a new form of trade protectionism.

In addition to establishing new rules to govern the use of sanitary and phytosanitary requirements in trade, the Uruguay Round also resulted in the establishment of the World Trade Organization (WTO), including several Committees within the WTO structure to monitor implementation of the various agreements (including the SPS Agreement) and to administer the dispute settlement procedures. Under the dispute settlement procedures, negotiated during the Uruguay Round, WTO member countries have the right to challenge other WTO member whose import measures or policies are inconsistent with the SPS Agreement.

The SPS Agreement recognizes the fundamental right of countries to protect the health and life of their consumers, animals, and plants against pests, diseases, and other threats to health. Furthermore, the SPS Agreement explicitly recognizes the sovereign rights of countries to set their level of protection for pest or disease threats at the level they deem appropriate. However, the basic right to protect against harmful pests and disease is tempered by several rules aimed at preventing the use of health measures in an unjustified, arbitrary, or discriminatory fashion. The primary obligation is that SPS protection measures must be based on either a relevant international standard that is established either by the international standards body recognized by the SPS Agreement or a scientific risk assessment. For plant quarantine authorities, this means being able to demonstrate the threat of a particular pest or disease of concern that makes a particular phytosanitary regulation (i.e., import requirements or border controls) necessary.

## Organic Updates

### Organic Trade Association Receives Export Promotion Funds

On June 9, Secretary Glickman announced fiscal year 2000 allocations of \$90 million to 65 U.S. trade organizations for export promotion activities under the Market Access Program (MAP). Under the MAP, USDA enters into agreements with U.S. agricultural trade organizations, state regional trade groups (SRTGs), and cooperatives to share the costs of overseas marketing and promotional activities in specified countries. The Organic Trade Association has been allocated \$48,520 for 2000. This will be the second year OTA has participated in the program.

### Japan Introduces New Organic Standards

On June 10, Japan's Ministry of Agriculture, Forestry, and Fisheries (MAFF) officially introduced its new organic production standards and certification system. Enforcement is set for April 1, 2001. Traders report limited supplies of domestically grown products that meet MAFF's new standards and, as a result, predict a shift away from foods marketed as "organic" to alternative labels not subject to third-party verification (e.g. "reduced chemical", "healthy vegetables"). However, other trading houses project increased import opportunities as buyers broaden their search to locate overseas products that meet the new standards. Buyers are reportedly most interested in fresh and frozen vegetables, rice, soybeans, and juice concentrates.

### Danish Eye Organic Export Opportunities

A recent survey of 88 Danish small- to medium-sized organic companies revealed that 33 were already exporting and that 35 were considering it. The organic products represented in the survey included dairy products, fruits, vegetables, cereals, flour, bread, cookies, meat, eggs among others, although most of the exporting companies also exported conventional food. Major markets were the United Kingdom, Germany and Sweden; only a few companies cited France, the United States and Austria as markets. On the subject of market assistance, 70 percent of survey respondents expressed interest in learning more about national requirements for organic production, 25 percent noting they had difficulties in getting approval for their products in other countries. Sweden was cited as the most difficult country in this regard.

For more news on organics, see HTP's monthly newsletter "Organic Perspectives," available at the HTP home page: [www.fas.usda.gov/htp/organics/organics.html](http://www.fas.usda.gov/htp/organics/organics.html). The newsletter contains reports on organics from around the world gleaned from attache reports, trips made by HTP's organics staff, and other sources. The newsletter also covers items of interest about the U.S. national organic program and the domestic organic industry. A list of upcoming conferences, trade shows and other events is included in every issue.

*(For further information, contact Janise Zygmont at 202-720-1176.)*

## Export News and Opportunities

### GSM-102: No Activity Since Last Publication

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceed that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report. If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amounts due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

Exporters may apply for credit guarantees on a first-come, first-served basis to cover sales of any of the commodities specified in the GSM list of commodities published in FAS program announcement PR 0003-00, issued January 5, 2000, or as superseded. The list of eligible commodities will apply to all individual country and regional announcements unless otherwise stated in the announcements. The following horticultural products are eligible under the export credit guarantee programs for FY 2000: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. From time to time, this list may be amended as additional commodities become eligible. For most countries and regions, the allocation does not assign dollar amounts to any of the commodities specified in the GSM list of commodities, providing buyers and sellers maximum flexibility in arranging the size of their transactions within the scope of the overall allocation.

The GSM-102 table presents the FY 2000 GSM-102 for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of June 15, 2000. Additional information about the GSM-102 program, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

<http://www.fas.usda.gov/excredits/exp-cred-guar.html>

## **Supplier Credit Guarantees Available to Developed/Mature Markets: Taiwan**

On June 6, the U.S. Department of Agriculture (USDA) authorized \$50 million in supplier credit guarantees for sales of U.S. agricultural commodities to Taiwan under the Commodity Credit Corporation's Supplier Credit Guarantee Program (SCGP) for fiscal year 2000. Exporters may apply for credit guarantees on a first-come, first-served basis to cover sales of any of the commodities specified in the GSM list of commodities published in FAS program announcement PR 0003-00 of Jan. 5, 2000, or as superseded. The allocation does not assign dollar amounts to any of the commodities specified in the GSM list of commodities, providing buyers and sellers maximum flexibility in arranging the size of their transactions within the scope of the overall allocation.

In addition to Taiwan, USDA is also considering expanding the scope of eligible countries under the SCGP to include other developed/mature economies or markets. **If you would like to discuss other developed/mature markets where supplier credit guarantees would help to facilitate horticultural exports, please contact Yvette Wedderburn Bomersheim on (202) 720-0911.**

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The Supplier Credit Guarantee table presents the FY 2000 Supplier Credit Guarantee Program for which USDA has authorized credit guarantees for sales of U.S. horticultural products as of June 15, 2000. Additional information about the SCGP, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

<http://www.fas.usda.gov/excredits/scgp.html>

The General Sales Manager will consider requests to establish a SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products which are currently not eligible.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes

signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

Program announcements which can be accessed on the Internet provide information on specific country and commodity allocations, length of credit periods, the required form of promissory note, and other program information and requirements.

*(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim, 202-720-0911 or Elizabeth Mello 202-720-9903).*

*Thank you for your order!*

# FOREIGN AGRICULTURAL SERVICE PUBLICATIONS

The publications listed below present timely and reliable information on U.S. and world production, supply and demand, and trade for many different commodities. All these publications can be subscribed to through the National Technical Information Service (NTIS) of the U.S. Department of Commerce. To order, call NTIS at 1-800-363-2068, (703) 605-6060, or (703) 487-4639 for TDD (hearing impaired only). A subscription form is provided on the reverse side.

## **Tropical Products: World Markets and Trade**

Issued four times a year. Provides information on the world production and supply and demand situation for coffee and tea. Presents U.S. trade data on spices and essential oils.

## **Cotton: World Markets and Trade**

Monthly report provides statistics and other information on U.S. and world production, supply and demand, and trade for cotton. Covers crop conditions, the latest trade policy developments, and export market information.

## **Dairy, Livestock and Poultry: U.S. Trade and Prospects**

Quarterly report provides U.S. trade information and analyses of the trade of dairy, livestock, and poultry products.

## **Dairy Monthly Imports**

Monthly report of imports of cheese and other quota dairy products subject to licensing, as well as imports under the quota not subject to licensing.

## **Livestock and Poultry: World Markets and Trade**

Semi-annual publication provides information on U.S. and world production, use and trade of livestock and poultry products, trade policy developments, and export market information.

## **Dairy: World Markets and Trade**

Semi-annual publication provides information on U.S. and world production, use and trade of dairy products, trade policy developments, and export market information.

## **Grain: World Markets and Trade**

Monthly publication provides information on U.S. and world production, supply and demand, and trade for a variety of grains. Covers crop estimates, the latest trade policy developments, and export market information.

## **World Horticultural Trade and U.S. Export Opportunities**

Monthly publication provides information on the world situation and outlook for horticultural products. Covers export competition, foreign market import potential, and export opportunities for U.S. horticultural products.

## **Oilseeds: World Markets and Trade**

Monthly publication provides data and analyses on U.S. and world production, supply, use, and trade of a variety of oilseeds and products. Covers production estimates, latest trade policy, commodity prices, and export market information.

## **Sugar: World Markets and Trade**

Semi-annual publication provides information on the world production and supply and demand situation for sugar. Includes in-depth special country features.

## **Tobacco: World Markets and Trade**

Quarterly report provides information on U.S. and world production, supply and demand, and trade for tobacco. Covers crop estimates, the latest trade policy developments, and export market information. The March issue contains complete U.S. tobacco trade data for the preceding calendar year.

## **World Agricultural Production**

Monthly report provides information on U.S. and world production of major agricultural products, including crop, weather and production briefs, and special articles of interest to the trade.

## **Wood Products:**

### **International Trade and Foreign Markets**

Issued five times a year. Provides information on the production, trade, and supply and demand situation in countries around the world for wood products. Highlights the latest trade policy developments, export statistics, and market information of interest to U.S. exporters.

## **Monthly Summary of Export**

### **Credit Guarantee Program Activity**

Monthly summary report shows fiscal year commitment figures for the Commodity Credit Corporation's Export Credit Guarantee Program (GSM-102) and Intermediate Credit Guarantee Program (GSM-103).

## **U.S. Export Sales**

Weekly report based on reports submitted by private exporters. Outstanding export sales as reported and compiled with other data give a snapshot view of the current contracting scene. All countries with outstanding sales or accumulated exports are included for each class of wheat, all wheat, wheat products, corn, soybeans, soybean cake and meal, American pima cotton, all upland cotton, whole cattle hides, and wet blues.

## **AgExporter Magazine**

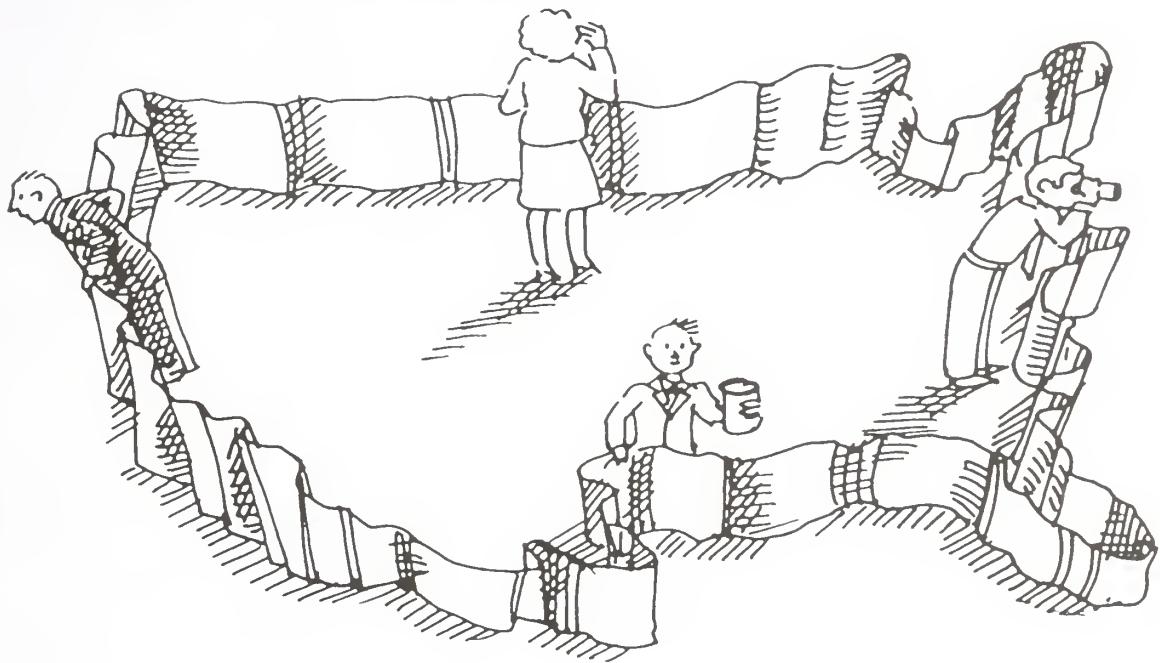

Monthly magazine for businesses selling farm products overseas provides tips on exporting, descriptions of markets with the greatest sales potential, and information on export assistance available from the U.S. Department of Agriculture. The audience is U.S. agricultural producers, exporters, trade organizations, state departments of agriculture, and any other export-oriented organization.

## **Food and Agriculture Directory**

Directory features up-to-date listings of federal and state agencies, trade associations and a host of other organizations that can help you penetrate foreign markets. Includes phone and fax numbers.

# Think outside the borders.

Ever felt like you were trapped inside a cookie cutter,  
with all your competitors chasing the same customers?

Well, **96 percent of the world lives outside our borders** and,  
with a little effort and a little help, you can reach them.

**USDA's Ag Export Services** can put your message on line and  
in newsletters, translated into dozens of languages and in front of  
**buyers in 75 countries for \$15.** And that's just for starters.

*To learn how you can sell your food or fiber products  
outside our borders, contact USDA's Ag Export Services.*

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail [kaup@fas.usda.gov](mailto:kaup@fas.usda.gov)
